

# WTR 110/800

**Self-Propelled, rechargeable, and electrically driven irrigation machine.**  
Equipped with power pack and automatically folding boom.

**The WTR 110/800 enables autonomous movement.**  
**Hose deployment/retraction without water pressure.**

The power pack is recharged through a turbine/generator solution.  
The generator supplies power when the machine is operating under water pressure.

**Equipped with a newly developed, proprietary control system.**  
This enables operation of the irrigation machines various working modes  
and is designed to accommodate future functionality requirements.

## **Smart Irrigation - smarter future.**

Once connected to a hydrant or water source, the WTR machine activates and follows a precise GPS-guided path across the field. This will completely eliminating the need for a tractor or manual labor during deployment.

It also enables irrigation during hose rollout, allowing water to be distributed in two efficient cycles for enhanced flexibility and coverage.

Access and monitoring of the machine is available through an app (tablet/phone).

Supports allocation card.

The boom will be extended to 72 meters.
